

Your Web-based resource locator tool

Provide patrons with a simple, easy-to-navigate browse and search interface for all print and electronic resources in your library's collection with EBSCO A-to-Z®.

The comprehensive EBSCO A-to-Z knowledge base represents all major database vendors and publishers, with information on more than 190,000 unique titles from more than 1,350 databases and e-journal packages.

## Highlights:

- add all databases, packages and individual titles in a few simple clicks
- enhanced proxy support
- view duplicate journals and duplicate coverage through Overlap Analysis
- broad menu of customization options
- add note fields for your library staff.

## Benefits:

- keep resources from being overlooked with a customized list of accessible titles
- have quick, organized access to online hosting sites (EBSCOhost®, ScienceDirect®, MetaPress®, etc.)
- improve end-user satisfaction through accurate coverage data
- inform end users with notes about access rights and restrictions
- save valuable staff time — EBSCO manages the knowledge base.

EBSCO A-to-Z can be further customized with any combination of the following add-on services:

### LinkSource®

LinkSource® is a vendor-neutral OpenURL link resolver that puts the library in control of item-level linking and helps to maximize the use of its full-text collections. Using LinkSource's extensive knowledge base, the library administrator can select the appropriate resources (databases, e-journal sites, etc.) to be linked and apply the conditions that determine when the links display, solving the "appropriate copy" problem.

### WebFeat Express™

WebFeat Express™ is a federated search engine packaged with EBSCO A-to-Z. Once the library has established the databases to which it has access in EBSCO A-to-Z, the WebFeat Express search engine can automatically detect them. The end result is that patrons can search any or all of a library's databases simultaneously through a single interface.

### EBSCO A-to-Z with MARC Updates

With EBSCO A-to-Z with MARC Updates, customers can elect to receive a MARC file of their electronic holdings on a monthly basis. This service acts as a single, comprehensive source of MARC cataloging that allows libraries to easily include virtually all their e-content in their catalog.

An alphabetical list of all your journals, including those in databases.

Direct links to each provider that contains the title.

"Tabbed" interface provides more functionality while maintaining simplicity.

Letter links provide easy browsing.

Sub-alphabet allows faster navigation.

Coverage displayed for each provider.

Users can also browse by subject. Libraries can choose to display LCC, General or Medical headings.

Advanced Search allows users to accurately zero-in on titles of interest.

"Dictionary-style" page list provides easy access to a specific page of results.

We link to the title level when available from the provider.
